CAREER OBJECTIVE

Motivated Software Engineer with practical experience in **Java**, **Angular**, and **MySQL**. Currently contributing to both frontend and backend development at a **startup**, which has helped me build a versatile and adaptable skill set in **software development, communication,** and **effective teamwork.** Seeking a software engineering role in an organization that will further challenge and enhance my skills, allowing me to grow into a well-rounded professional in the industry.

SKILLS

Languages & Frameworks: Angular, Java, Spring Boot
Architecture: Monolithic, Microservices, RESTful APIs
Frontend: Angular, CSS, HTML, TypeScript
Database: MySQL, SQL
Tools: Eclipse, Git, EE, Gitlab, Postman, STS, VS Code
Soft Skills: Dynamic Teamwork, Resilience

WORK EXPERIENCE

Platione (Former Cursive Technologies) | 02/2025 - Present

- **Integrated WhatsApp messaging** using third-party APIs to enable real-time seller-buyer communication — improving customer support and increasing inquiry response rates.
- Implemented **order status automation (Hot → Warm → Cold)** and **optimized data flow using TreeSet** to maintain product sequence — reducing outdated records and improving product visibility on company pages.
- Wrote **database migration scripts**, **modified table structures,** and **debugged frontend/backend errors** — deepening understanding of relational data design and improving overall system stability.
- Contributed to both frontend (Angular) and backend (Spring Boot) of a B2B product platform, enabling smooth interactions between buyers and sellers by enhancing product listing, company pages, and communication features.
- Designed and developed the Item Page UI, integrating multiple components and adding responsive design for all screen sizes — resulting in better user engagement and consistent layout across devices.

PROJECTS

B2B Product Management Platform – Platione

Tech Stack: Angular, Java, Spring Boot, MySQL, Postman, GitLab, REST APIs

- A web-based B2B platform designed to facilitate product listings, company management, and seamless communication between sellers and buyers.
- The platform supports operational workflows, lead handling, and sales insights for growing businesses.

Food Delivery System (Personal Project)

Tech Stack: Java, Spring Boot, MySQL, Postman, GitHub, REST APIs

- A comprehensive role-based web application designed to streamline food ordering and management for both customers and restaurant owners.
- The project delivers a user-centric online ordering experience, secure authentication, and role-specific dashboards, while utilizing robust backend technologies for efficiency and scalability.

EDUCATION

- PG DAC   - (Diploma In Advanced Computing)   - 09/2023 - 02/2024
- BE: E&TC - MMCOE   - 07/2017 - 06/2021

EXTRACURRICULAR

- **Volunteer** at Isha Yoga Center (Event Management and team work)
- **Hobbies**: Reading, Traveling
